

mh_projekt Real Estate Development

mh_projekt is a multi-faceted service enterprise in the area of real estate development. Our aim is to transform existing urban contexts into extraordinary places. The scope of our work reaches from infill development on single properties to comprehensive urban development concepts. The plurality of the city is reflected in the different scales and the broad range of uses that characterize our projects.

Every location and every project is unique and requires a specially tailored solution. We develop quality objects in harmony with their sites according to the highest standards in design, environmental technology and economics.

We link well-founded knowledge in the areas of planning and building, project coordination and financing with a vision for the individual site. The result is objects that are striking in their urban context, architecturally attractive and economically viable.

Constant monitoring of the building process, project organization methods and real estate market trends guide us in developing our service spectrum and work style.

By raising questions as we gather knowledge and experience, we remain innovative and can in turn guarantee you the high-quality, future-orientated results you expect.

Our understanding of the city is founded on the notion that existing qualities must be preserved as well as enhanced with high-quality infill development, city repair and re-structuring. Respect for the past linked with innovative change is the bases of a livable and lively city. Through our services ordinary places become great locations.

mh_projekt is a member of the Max Hoffmann Group, a network of independent firms which offers a broad spectrum of services and a decade of experience in the building industry. We effectively use our collective know-how from the very beginning on, so that even in the conceptual phase we can offer you the highest level of investment security possible. Our experienced employees are able to guide you through any number of stages, from the first idea to the finished building, insuring a well-informed, highly professional and thus cost-effective process.
